

Stucco Encausto Fiorentino

Wonderful Marmorino Effects

Resulting from the ancient synergy of particular marble chips with lime putty, for elegant and original marble-looking opaque and semi-opaque effects.

Encausto Fiorentino: grainy slaked lime-based decorative stucco

This product is a natural decorative plaster in paste produced according to the experience of old formulas and with the aid of new technologies. It allows you to obtain a marble-like finishing with a spotted semi-flat effect. Endowed with an extraordinary perspiration and an excellent anti-mould power (thanks to the disinfectant power of the lime), ENCAUSTO FIORENTINO can be applied on both exterior and interior surfaces. It hardens in consequence to the chemical process of carbonatation: the calcium hydroxide (primary binder of the product) reacts with the carbonic anhydride present in the air by producing calcium carbonate, which is marble's main component (hence the name "marmorino"). Thanks to its features, it is largely applied as an elegant finish for all prestige environments. Composition: Long-seasoning slaked lime, high-selected calcareous filler, non-toxic additives Treatment of the support: The application on lime supports is recommended, but it can also be applied on plaster or by-products, old hydropaints, only if strong and well-fixed, after the application of a coat of Primer RV for hard supports (such as plasterboard, cellular cement, baked clay, etc.) (photo nr.1). Application: Spread a coat of Encausto Fiorentino with a stainless steel float so as to level the support (photo 2). Apply a second coat of Encausto Fiorentino so as to obtain a perfectly smooth surface. Once the product is dry, compress slightly and polish with a clean stainless steel float until the desired result is obtained (photo 3).

Packaging and cover:

StuccoMarmo : sizes: 1 quart, 1 gallon, 2 gallons, 4 gallons, cover: 12 to 15 sqft / quart
